FRONT loading washing machine

VS

TOP loading washing machine

PROS

Front loading washing machine

- Appliance can be stacked
- Larger capacity
- Better cleaning performance
- More cycle options
- More energy efficient
- Front loaders use significantly less water
- The higher spin speed extracts more moisture and allows for more efficient drying.

Top loading washing machine

- You can add laundry after the cycle has started
- Wash cycles are much shorter
- Minimal vibration
- No odours issue
- Less complicated control panel

CONS

Front loading washing machine

- More expensive
- Longer washing cycle time
- It may vibrate on the spin cycle
- Water could get trapped inside, causing odours to form

Top loading washing machine

- Lower cleaning performance
- Not stackable.
- Top loaders use more water and detergent
- Washing cycles can't be adjusted to fit specific requirements.
- Because of the lower spin speed, water could remain in the wet load after the spin cycle, which can lengthen drying time
